

An easy to fit, easy to use visual indicator so you can be confident your Filtermist unit is protecting people from exposure to harmful airborne oil mist particles.

The **F Monitor Essential** measures velocity pressure to check the airflow is correct and a simple traffic light system makes it easy for the machine operator to identify any potential issues.

- ✔ Uses two standard AA batteries
- ✔ No electrical connection required
- ✔ Attaches to machine using magnets

Protecting People
Cleaner, safer, more
productive workshops

A green light flashes on the **F Monitor Essential** to let the machine operator know that the airflow is correct, if the airflow starts to drop the light changes to amber, and if there is a problem it turns red.

 Airflow is at least >55% of the original calibrated setting
No action needed

 Airflow is between 41-55% of the calibrated setting
Machine operator to notify line manager

 Airflow has dropped to less than <41% of specified rate
Immediate attention required

- ✔ Easy to install
- ✔ Easy to see
- ✔ Easy to check

A QR code printed on the front of the monitor directs users to a dedicated web page containing F Monitor Essential resources including the user guide.
